

Index to A.S.M.E. Transactions

Volume 52, 1930

This is essentially a subject index, and is not an index by titles. Articles treating a number of different subjects are listed under each of them. The alphabetical method is followed. If there is a choice of two or more keywords, the one most generally used has been selected for the subject head, and cross-references are supplied. To assist in locating material similar in character a note is included under the heading to "see also" certain other headings. Authors and discussors of papers are included. (D) denotes discussion; (R), in the Record and Index Section, denotes annual reports.

The different sections of the Transactions are designated by symbols, the following being used: AER (Aeronautics), APM (Applied Mechanics), FSP (Fuels and Steam Power), HYD (Hydraulics), IS (Iron and Steel), MAN (Management), MH (Materials Handling), MSP (Machine-Shop Practice), OGP (Oil and Gas Power), PET (Petroleum), PI (Printing Industries), RR (Railroads), TEX (Textiles), WDI (Wood Industries), and RI (Record and Index). In this Index, except for references to the Record and Index Section, three numbers follow the symbol for the section; the first is the volume number, the second the paper number, and the third the page number. Thus AER-52-18-93 signifies that the material is found in the Aeronautics Section, vol. 52, paper No. 18, on page 93. In the case of the Record and Index Section of Transactions, there is no paper number, the entire section being numbered consecutively from page 1 to the end, so that the first number refers to the volume and the second to the page (RI-52-81).
